SUBJECT: COMANCHE PEAK STEAM ELECTRIC STATION
DOCKET NOS. 50-445 AND 50-446
SEISMIC AND DYNAMIC QUALIFICATION OF
TURBINE DRIVEN AUXILIARY FEEDWATER
PUMP CONTROL PANEL

REF: (1) TXX-4208 of June 29, 1984, entitled
"Equipment Seismic and Dynamic
Qualification Justifications for
Interim Operation"

Dear Sir:

Reference (1) reported that the seismic and dynamic qualification of the Turbine Driven Auxiliary Feedwater Pump Control Panel was incomplete and provided a Justification for Interim Operation (JIO) for this panel. The seismic and dynamic qualification of this panel is now complete and has been accepted for the Comanche Peak Steam Electric Station (CPSES).

The acceptance of this qualification is documented by transmittal TSG-5709 of July 19, 1984 and is based on:

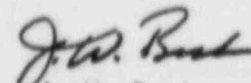

TERRY CORP.

Seismic Compliance Report, Control Panel for Auxiliary
Feedwater Pump Drive Turbine, Report No. E/L#20722 Rev. 0,
dated July 11, 1974 Supplemented by TSG-5783 (attached).

Based on the information provided above, the seismic and dynamic qualification of the Turbine Driven Auxiliary Feedwater Pump Control Panel can be considered a closed issue on the CPSES dockets.

Respectfully,

8409250161 840919
