FCAR Update - Revision 18

This letter contains an update of the Final Safety Analysis Report (FSAR) for Pilgrim Nuclear Power Station reflecting the changes for Technical Specification Amendment 155 - Spent Fuel Storage Capacity. This change was not included in the annual submittal dated June 29, 1995 (BEC0 Letter 2.05.069).

Additionally, we would like to take this opportunity to inform you of a future initiative. In an effort to reduce costs associated with regulatory requirements (i.e., regulatory burden reduction), Boston Edison is planning to remove Edison drawings from the FSAR in the next annual update. The controlled drawings will be referenced in the FSAR. Current controlled drawings will continue to be available to the NRC Senior Resident at the Pilgrim site. We estimate this initiative will lead to a cost savings of over \$200,000 over the life of the plant.
