Inspection Summary

Inspection on November 18-22, 1991 (Reports No. 50-373/91024(DRSS);
No. 50-374/91024(DRSS))

Areas Inspected: Routine, announced physical security inspection involving: Management Effectiveness; Physical Barriers-Protected Area; Lighting; Access Control-Personnel, Packages and Vehicles; Detection Aids-Protected Area; and a review of previous inspection findings.

Results: The licensee was found to be in compliance with NRC requirements within the areas examined. We concluded that the security program was well implemented and managed. The resources were adequate and the Training and Qualification program was effective. The licensee continued implementation of an extensive audit program performed by security professionals from other Commonwealth Edison Nuclear facilities. The audit team concluded that regulatory requirements were being met and in some areas exceeded. Management attention to and involvement in security performance continued to be good. Construction projects involving the new administration building and access facility continued to progress adequately.
