U.S. Nuclear Regulatory Commission
Attention: Document Control Desk
Washington, D.C. 20555

Gentlemen:

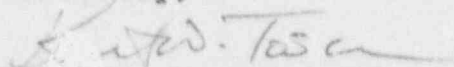

Subject: Oyster Creek Nuclear Generating Station (OCNGS)
Docket No. 50-219
Technical Specification Change Request (TSCR) #
193, Deletion of Fire Protection Requirements from
the Technical Specifications (TS)

On April 20, 1992, GPU Nuclear Corporation, licensee of the Oyster Creek Nuclear Generating Station, submitted the above amendment to the Nuclear Regulatory Commission (NRC). Consistent with the requirements in NRC Generic Letter 88-12, "Removal of Fire Protection Requirements from Technical Specifications", this TSCR proposes to (1) remove requirements for fire protection systems from the TS, (2) remove fire brigade staffing requirements from the TS, and (3) revise the administrative controls in the TS to support the fire protection program. The requirements being removed from the TS have been incorporated into the OCNGS fire protection program.

The New Jersey Department of Environmental Protection and Energy's Bureau of Nuclear Engineering (BNE) reviewed the subject amendment in accordance with the requirements of 10CFR50.91 (b). Based on this review, the BNE does not have any comments on the proposed license change request.

If you any questions, please contact Suren Singh at (609) 987-2039 or Chris Dell at (609) 987-2086.

Sincerely,

Kent Tosch, Manager
Bureau of Nuclear Engineering
