Mr. E. J. Woolever, Vice President
Nuclear Construction Division
Duquesne Light Company
Robinson Plaza Bldg. II, Suite 210
Pittsburgh, PA 15206

Dear Sirs:

Subject: Development of Technical Specifications for Beaver Valley Power
Station - Unit 2 (BVPS-2)

In our letter of February 1, 1984, we discussed your submitting technical specifications for BVPS-2 consistent with NUREG-0452, Standard Technical Specifications for Westinghouse Pressurized Water Reactors, Revision 4, Fall, 1981. The staff has recently reconsidered the desirability of requiring second unit technical specification upgrades, and has determined that multiple unit sites should have virtually identical technical specifications, except where changes are required to recognize design differences, safety concerns, and new regulatory requirements applicable to the second unit.

As a result of this position, we would normally expect you to provide for Unit 2, the staff's Unit 1 technical specifications marked up to reflect any changes required for Unit 2 approximately 12-18 months prior to your expected date for issuance of your operating license. After our staff review of your submittal, we will contact your staff to resolve any differences of opinion through appropriate meetings. Upon resolution of these differences, a Proof and Review Copy of the technical specifications will be provided to you for your comments. The schedule for this review will be established consistent with providing a Final Draft version (with applicable comments from Proof and Review Copy resolved and incorporated) for transmittal to you 30 days prior to the schedule date for issuance of the operating license. This transmittal will request your review and certification that the proposed technical specifications accurately reflect the as-built plant and the BVPS-2 FSAR.

Sincerely,

ORIGINAL SIGNED BY

George W. Knighton, Chief
Licensing Branch No. 3
Division of Licensing
