Office of Nuclear Reactor Regulation  
Attn: Mr. John F. Stolz, Chief  
Operating Reactors Branch No. 4  
U. S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Sir:

Three Mile Island Nuclear Station, Unit 1 (TMI-1)  
Operating License No. DPR-50  
Docket No. 50-289  
Emergency Operating Procedures (EOP) Upgrade Program  
Response to SER Questions  
(NUREG 0737, Item I.C.1)

Our letter of June 29, 1984 was in response to your March 28, 1984 request for additional information which was included as Appendix A to the Safety Evaluation Report (SER) for TMI-1's Plant Specific ATOG Procedures Generation Package. In order to complete our response to questions No. 12 and 13, we stated that it would be necessary to use the results of steam generator tube rupture analysis which were being conducted by the Electric Power Research Institute (EPRI).

The work by EPRI is progressing but will not be available until the end of the year. As a result of this delay, we need to revise our schedule to reflect a submittal in the first quarter of 1985 for providing the remainder of our response.

Sincerely,

  
H. D. Hukill  
Director, TMI-1
