Subject ABWR PRA - CONFERENCE
ANALYSIS / SITE ACCEPTABILITY

Message _____

The following modification
addresses the necessary
correctives for the site
acceptability aspects. This
is item CA-1 on the
punch list.

cc JNFOT
HA Crowley

Modification to ABWR paragraph 2.2.2, change next to last paragraph beginning with "The basic reference...." to read as follows

The basic reference case used for determining individual and societal risk comparisons (see Table 2.2-1) uses a 95/5 evacuation model as is shown in Table 19E.3-3. For the determination of dose consequences for comparison to the dose goal shown in Table 2.2-1 no evacuation or shielding factors were assumed. If the results for a specific site using the above assumptions prove unacceptable, then site specific evacuation and shielding parameters may be substituted in lieu of the reference values in Subgroup Evaluation.
