PRELIMINARY NOTIFICATION OF EVENT OR UNUSUAL OCCURRENCE -- PNO-IV-84-25

This preliminary notification constitutes EARLY notice of events of POSSIBLE safety or public interest significance. The information is as initially received without verification or evaluation, and is basically all that is known by NRC staff on this date.

FACILITY: Omaha Public Power District
Fort Calhoun Station
Docket 50-285
Blair, Nebraska

Licensee Emergency Classification:
 Notification of Unusual Event
 Alert
 Site Area Emergency
 General Emergency
 Not Applicable

SUBJECT: PRESSURIZER SPRAY VALVE FLANGE LEAK

On Sunday, November 18, 1984, the licensee identified increased leakage from the Reactor Coolant System (RCS) on the pressurizer spray valve flange. An increase in iodine activity was noted in the containment atmosphere during the normal shutdown preparation. The plant was shutdown the evening of November 18, for repair of the leakage. The licensee is planning a 10-day to 2-week outage for maintenance work. The licensee plans a press release the morning of November 19, 1984. The SRI is onsite following licensee activities during normal plant shutdown and cooldown.

Region IV received notification of the event from the Headquarters Duty Officer at 9:30 p.m., CST, November 18, 1984.

The licensee plans a press release Monday morning, November 19, 1984. The NRC does not plan a news release.

The state of Nebraska has been notified.
