Gentlemen:

Subject: Hope Creek Generating Station  
Docket No. 50-354  
License Change Request 91-17  
Low Pressure Coolant Injection (LPCI) and Core Spray  
System (CSS) Alarm Instrumentation

By letter dated June 15, 1992, Public Service Electric and Gas Company (PSE&G) submitted the subject license change request to the Nuclear Regulatory Commission (NRC). The proposed change would provide an allowable-out-of-service time (AOT) for the LPCI system and CSS discharge line "keep filled" alarm instrumentation. This would allow monthly surveillance tests to be performed on interrelating instrumentation without requiring the LPCI and/or CSS system(s) to be vented.

The New Jersey Department of Environmental Protection and Energy's Bureau of Nuclear Engineering (BNE) reviewed the above amendment in accordance with the requirements of 10CFR50.91(b). Based on this review, BNE does not have any comments on the proposed change request.

If you have any questions, please contact Suren Singh at (609) 987-2039.

Sincerely,

Kent Tosch, Manager  
Bureau of Nuclear Engineering
