Date

## Inspection Summary

Inspection on July 13-17, 1992 (Report No. 50-461/92014(DRSS))

Areas Inspected: Routine, announced physical inspection involving: Protected and Vital Area Physical Barriers, Detection and Assessment Aids; Protected and Vital Area Access Control of Personnel, Packages and Vehicles; Alarm Stations and Communications; and Compensatory measures.

Results: No violations of NRC requirements were identified. Two weaknesses were identified in the implementation of ingress and egress procedures in the Craft Security Portal. The licensee took adequate corrective measures to address the weaknesses prior to the conclusion of the inspection.

Excellent staff communication/coordination was observed during the licensee's first week of construction-related activities for the security upgrade program. Enhancements to the tactical response weapons capability and to the onsite firing range were identified. Vital area barriers were found to be maintained in an excellent condition.

The security program is well managed and is supported by senior management. Licensee-identified hardware system weaknesses are being addressed through the current security system upgrade program.
