Dear Dr. Murley:

CORRECTIONS TO RECORD
SIGNIFICANT CONSTRUCTION DEFICIENCIES
HOPE CREEK GENERATING STATION

In light of your recommendation No. 3 on page 13 of the Hope Creek SALP Report for 1983-84, we have initiated a review of our correspondence with your office for the period January 1, 1984, to date. During this review we have identified the below listed corrections to record.

1. PSE&G letter, dated September 28, 1984, regarding defects in lube oil pump discharge nozzles (CDR No. 84-00-07), references Nonconformance Report No. 3926. This number should read 3826.
2. PSE&G letter, dated January 21, 1985, concerning incompatible grease added to Limitorque operators (CDR No. 84-00-16), identifies the added grease as Exxon Nebula EP-2 grease. This should read Exxon Lidok EP-2 grease. Also, we wish to add Exxon Nebula EP-1 grease to the list of greases which Limitorque operators were shipped with from the manufacturer. The litmus paper test, then, was used to distinguish the Exxon Lidok EP-2 grease from the Exxon Nebula EP-1 grease which is of similar coloration.

We have evaluated these corrections and conclude that they have no impact on the reported deficiencies, our safety analyses or the corrective actions taken. We have made pen and ink corrections

to our file copies of the affected documents and have annotated these corrections to our computer assisted document retrieval system.

Should you need any additional information, please let us know.

Very truly yours,

A handwritten signature in cursive script, appearing to read "J. J. Quarten". The signature is written in dark ink and is positioned to the right of the typed name.
