SUBJECT: Transmittal of Weather
Alert Radio Survey
Results from FOSAVEX '84

Dear Mr. Johnson:

Attached is a copy of the "Weather Alert Radio Effectiveness in Platteville" report which summarizes the results of a survey conducted by Research Services, Inc. for Public Service Company of Colorado following the FOSAVEX 1984 emergency drill.

We had hoped to be able to compare the results of this study with those of a similar study conducted by FEMA, but administrative problems within FEMA have delayed distribution of their report for an uncertain duration.

If you have any questions, please contact Mr. Frank Novachek at (303) 785-2224, Extension 201.

Sincerely,

J. W. Gahm
Manager, Nuclear Production
Fort St. Vrain Nuclear
Generating Station
