Director of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, DC 20555

ATTN: Mr. C. O. Thomas, Chief
Standardization and Special Projects
Division of Licensing

Gentlemen:

Transmitted herewith is an upgraded Physical Security Plan for the AGN-201 Nuclear Reactor Facility and Special Nuclear Material Storage area at Memphis State University (Docket 50-538). The revised plan is submitted pursuant to 10 CFR 50.90.

A request for amending our reactor facility operating license to authorize SAFSTOR status for the reactor and reactor fuel has been submitted under separate cover. Accordingly, the enclosed upgraded security plan is submitted in support of the proposed amendment to demonstrate how Memphis State University plans to comply with 10 CFR 73 during a term of protective storage.

Should you have any questions, please contact Robert R. Riley, Jr., our project manager for the facility, at (901) 454-2256.

Sincerely,

Van N. Oliphant
Vice President
Advancement and Continuing Education
