Docket No. 50-346
License No. NPF-3
Serial No. 1103
November 20, 1984

Director of Nuclear Reactor Regulation
Attention: Mr. John F. Stolz
Operating Reactor Branch No. 4
Division of Operating Reactors
United States Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Stolz:

Under separate cover, we are transmitting three (3) original and forty (40) conformed copies of an application for Amendment to Facility Operating License No. NPF-3 for the Davis-Besse Nuclear Power Station Unit No. 1.

This application requests that the Davis-Besse Nuclear Power Station Unit 1 Technical Specifications, Appendix A, be revised to reflect the changes attached. The proposed changes involve Section 3.6.1.2, 4.6.1.2 and Bases.

The attachments identify the changes, Safety Evaluation and Significant Hazard Consideration for the Containment Isolation Valves (Purge and Exhaust). The proposed amendment request is in response to NRC request dated December 3, 1982 (Log No. 1143) for leak testing to detect excessive resilient seal deterioration.

Enclosed is a check for \$150 as required by 10CFR170.12(C) for license application.

Very truly yours,

RPC:GAB
