Mr. Dennis M. Crutchfield  
Director  
Division of Reactor Program Management  
Office of Nuclear Reactor Regulation  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

NOV 30 1994

Dear Mr. Crutchfield:

Enclosed is a copy of the final exercise report for the December 7-8, 1994, full-participation plume and ingestion exposure pathway joint exercise of the offsite radiological emergency response plans site-specific to the Seabrook Nuclear Power Station. For New Hampshire, the state of New Hampshire, the risk communities of Brentwood, East Kingston, Exeter, Greenland, Hampton, Hampton Falls, Kensington, Kingston, Newfields, New Castle, Newton, North Hampton, Portsmouth, Rye, Seabrook, and Stratham, and the host community of Manchester participated in the exercise. The State of New Hampshire implemented its compensatory response plan for the risk community of South Hampton, which was the only New Hampshire risk community not to participate in the exercise. For Massachusetts, the Commonwealth of Massachusetts, the risk communities of Amesbury, Newbury, Newburyport, Salisbury, and West Newbury, and the host community of Tewksbury participated in this exercise. The Commonwealth of Massachusetts implemented its compensatory response plan for the risk community of Merrimac, which was the only Massachusetts risk community not to participate in the exercise. The State of Maine also participated in the exercise. The final exercise report was prepared by the Federal Emergency Management Agency (FEMA) Region I staff. A copy of this report will be provided to the States of New Hampshire and Maine and the Commonwealth of Massachusetts by the FEMA Region I staff.

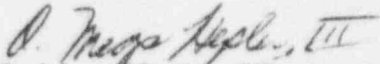

There were no Deficiencies identified during the December 7-8, 1994, exercise. There were, however, 59 Areas Requiring Corrective Action identified. The FEMA Region I staff will work with the State of New Hampshire and the Commonwealth of Massachusetts to correct these issues.

Based on the results of the December 7-8, 1994, exercise, the offsite radiological emergency response plans and preparedness for the States of New Hampshire and Maine, the Commonwealth of Massachusetts, and the affected local jurisdictions, site-specific to the Seabrook Nuclear Power Station, can be implemented and are adequate to provide reasonable assurance that appropriate measures can be taken offsite to protect the health and safety of the public in the event of a radiological emergency at the site. Therefore, the Title 44 CFR, Part 350, approval of the New Hampshire and Maine Radiological Emergency Response Plans for Seabrook Station, granted November 9, 1990, and March 16, 1988, respectively, will remain in effect.

9572290302 XA

If you should have any questions, please contact Ihor W. Husar, Chief, State and Local Regulatory Evaluation and Assessment Branch, at (202) 646-4065.

Sincerely,

  
O. Megs Hepler, III  
Director  
Exercises Division  
Preparedness, Training, and  
Exercises Directorate
