

MAR 6 1985

Docket No. 50-341

The Detroit Edison Company
ATTN: Wayne H. Jens
Vice President
Nuclear Operations
6400 North Dixie Highway
Newport, MI 48166

Gentlemen:

This refers to the routine safety inspection conducted by J. F. Norton and C. C. Williams of this office on November 28-30, December 17-21, 1984, and February 21 and 22, 1985, of activities at the Fermi Nuclear Plant authorized by NRC Construction Permit No. CPPR-87 and to the discussion of our findings with Mr. R. Bryer and others.

The enclosed copy of our inspection report identifies areas examined during the inspection. Within these areas, the inspection consisted of a selective examination of procedures and representative records, observations, and interviews with personnel.

As a result of this and previous NRC inspections, a number of technical quality issues and noncompliances were identified. Subsequently, Detroit Edison and their consultants, and NRR, have resolved these issues. The determination has been made that the "as-built" Shore Barrier structure is acceptable providing certain monitoring requirements (described herein) are incorporated into the Plant Technical Specifications.

In accordance with 10 CFR 2.790 of the Commission's regulations, a copy of this letter and the enclosure(s) will be placed in the NRC Public Document Room.
