**SUBJECT: Supplement to Application for Amendment of Operating License Related to Safety Injection Refueling Water Tank Low Signal (TAC No. 93266)**

Enclosed please find the Omaha Public Power District's (OPPD) "Application for Amendment of Operating License" which seeks to amend Specification 2.15, Table 2-3 of the Fort Calhoun Station Unit No. 1 Technical Specifications (TS). This application for amendment supplements page 2-68b as previously submitted in Reference 2.

This proposed supplement replaces page 2-68b as was provided in Reference 2 related to the requirement for placing the Safety Injection Refueling Water (SIRW) tank low level channels in the "tripped" condition rather than placing them in "bypass." Specifically, Note j on page 2-68b is being expanded to include further guidance regarding Plant Review Committee review/judgment for prolonged operation with an inoperable channel in bypass. This proposal was discussed during a telephone conversation among NRC staff members (Messrs. S. J. Bloom and S. Sun) and members of my staff on November 2, 1995.

Attachment A contains a markup reflecting the supplemental page with the requested changes of the Technical Specifications. Additional information was added to the "Discussion and Justification" portion of the "Discussion, Justification and No Significant Hazards Consideration" (Attachment B) as provided in Reference 2. This supplemental information does not affect the "Significant Hazards Consideration" section.
