LIMITING CONDITIONS FOR OPERATION

SURVEILLANCE REQUIREMENTS

may be used to estimate flow.

- f. If the requirements of 3.8.B.3.a, 3.8.B.3.b, 3.8.B.3.c, 3.8.B.3.d, or 3.8.B.3.e cannot be met, suspend release of radioactive effluents via this pathway.
- g. With less than the minimum number of radioactive liquid radwaste monitors OPERABLE exert best efforts to return the instruments to OPERABLE status within 30 days and if unsuccessful explain in the next Semi-annual Radioactive Effluent Release Report why the inoperability was not corrected in a timely manner.

- 4. All liquids shall be processed through either the waste collector filter and demineralizer, the floor drain filter, or the fuel pool filter demineralizer as appropriate prior to their discharge when the projected dose due to the liquid effluent releases to unrestricted areas, when averaged over any month, exceeds 0.12 mrem to the total body or 0.4 mrem to any organ from the two reactors at the site. With liquid waste being discharged without treatment as required above, prepare and submit to the Commission within 21 working days pursuant to Specification 6.9.3, a Special Report which includes the following information:
 - a. Explanation of why liquid radwaste was

- 4a. Doses due to liquid effluent releases to areas at and beyond the SITE BOUNDARY shall be projected once per month in accordance with the methodology and parameters in the ODCM.

- 4b. The waste collector filter and demineralizer and the floor drain filter shall be demonstrated operable once per quarter, unless utilized to process liquid waste during the previous 13 weeks, by analyzing the liquid processed through the appropriate equipment to determine that it meets the requirements of Specification 3.8.B.1. The fuel pool filter demineralizer is exempt from this requirement since it is an alternate treatment system which is
