January 11, 1965

Mr. Roger S. Boyd, Chief  
Research & Power Reactor Safety Branch  
Division of Reactor Licensing  
Atomic Energy Commission  
Washington, D. C. 20545

Dear Mr. Boyd:

I have just returned from visiting the PG & E plant at Humboldt County, California.

I tried to reach you by telephone but was advised that you were in Geneva, and I am leaving February 8, 1965 on a trip around the Continent of Africa; and would like to see you in Washington at your convenience before February 8th.

I would like to review several matters with you, as we are at present surveying the farm on both sides on the geographical strata for a hot ditch on the outlet of the second coolant for the Oyster Creek Plant. I would like to go over same with you as to the effect this may have from a nuclear reactor standpoint on the agricultural experiments I am presently engaged in.

May I hear from you as soon as possible so that I may make arrangements accordingly to come to Washington.

Yours very truly,

*Norman C. Finninger*
