Mr. Robert D. Martin  
Regional Administrator, Region IV  
U.S. Nuclear Regulatory Commission  
611 Ryan Plaza Drive, Suite 1000  
Arlington, TX 76011

Dear Mr. Martin:

Subject: Waterford 3 SES  
Docket No. 50-382  
Response to Emergency Preparedness Appraisal  
Item 382/83-08-62

Reference: W3P83-4210 from K.W. Cook to E. Johnson, dated 12/28/83

In the above referenced letter, LP&L responded to Emergency Preparedness Appraisal Item 382/83-08-62 in the following manner:

"The original in-plant paging system was designed to account for high noise areas within the plant. The system will be reviewed for possible modifications resulting from equipment changes within the plant. Actual noise levels will be measured during 5% power operation. Following evaluation of this data the PA system will be expanded or supplemented by strobe lights to ensure emergency messages can be transmitted to all areas within the plant."

At this time LP&L would like to clarify the last sentence in the above response by restating it in the following manner:

"Following evaluation of this data the PA system will be expanded or supplemented by visual enhancements to ensure emergency messages can be transmitted to all areas within the plant."

This will allow LP&L the flexibility to use high-intensity strobe lights, rotating beacons or other visual aides to enhance the PA system, depending on a particular set of circumstances.
