

UNITED STATES
NUCLEAR REGULATORY COMMISSION

WASHINGTON, D. C. 20555

December 7, 1983

MEMORANDUM FOR: William J. Dircks
Executive Director for Operations

FROM: Harold R. Denton, Director
Office of Nuclear Reactor Regulation

SUBJECT: "SHOLLY" STATISTICS

Attached for your information is a table indicating a very low level of public interest and comments on proposed amendments issued pursuant to "Sholly". The statistics cover the period May 6 through November 22, 1983.

A request for hearing has been received on the Salem notice regarding extending the interval for the second inservice integrated leak rate test. One additional comment was received on TMI-1 as a result of publication on August 25, 1983 of a Notice of Additional Opportunity. Two requests for a hearing were received on the Turkey Point Units 3 and 4 notice related to proposed operational-limits for current and future reloads. One comment was received on the Susquehanna notice on ESW pump load sequence timers.

Since May 6, we have processed about 800 items for notice and comment, of which only four of the proposed no-significant-hazards-consideration finding have resulted in either comments or requests for hearing. As of October 26, there remained 232 items yet to be noticed, with the backlog completely eliminated for a few plants. After a full year, I plan to determine whether we should seek legislative changes in this area.

Harold R. Denton, Director
Office of Nuclear Reactor Regulation
