SLNRC 84-131 FILE: 0278  
SUBJ: Seismic Qualification of Operator  
Interface Modules (ESE-12A)

Mr. Harold R. Denton, Director  
Office of Nuclear Reactor Regulation  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Docket Nos.: STN 50-482 and STN 50-483

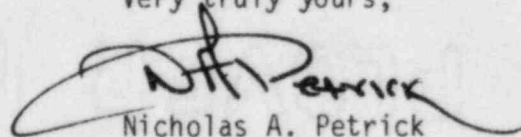

Reference: SLNRC 84-0123, dated October 16, 1984: Same Subject

Dear Mr. Denton:

The attachment revises the seismic qualification program Justification for Interim Operation (JIO) applicable to the Operator Interface Modules (ESE-12A) at the SNUPPS plants, Callaway Plant Unit No. 1 and Wolf Creek Generating Station Unit No. 1. The revision incorporates information provided in the reference letter which was submitted on the Callaway Plant docket, and provides additional information applicable to both SNUPPS plants. Revised sections of the JIO are identified by margin lines.

The attachment contains information proprietary to Westinghouse Electric Corporation. The basis for the proprietary nature of this information is that it has been extracted from ongoing equipment qualification testing performed under the Westinghouse generic qualification program described in WCAP-8687 (Westinghouse Proprietary Class 2). The Westinghouse generic qualification program is under review by the NRC's Equipment Qualification Branch, and the proprietary nature of WCAP-8687 data has been previously recognized by the NRC staff. The enclosed proprietary information has been provided to support the NRC staff review. Accordingly, it is respectfully requested that the information which is proprietary to Westinghouse be withheld from public disclosure in accordance with 10CFR Section 2.790 of the Commission's regulations.

Very truly yours,

  
Nicholas A. Petrick
