Gentlemen:

VOGTLE ELECTRIC GENERATING PLANT  
PROPOSED CONVERSION OF THE UNIT 1 AND UNIT 2  
TECHNICAL SPECIFICATIONS BASED ON NUREG-1431

By letter dated May 1, 1995, (LCV-0603) Georgia Power Company (GPC) proposed to amend the Vogtle Electric Generating Plant (VEGP) Unit 1 and Unit 2 Technical Specifications (TS). The proposed changes would, in part, convert the existing VEGP TS to the improved TS for Westinghouse plants as represented by NUREG-1431. Within the scope of this conversion, GPC proposed to relocate the following Administrative Control requirements to the Final Safety Analysis Report (FSAR) Update:

6.2.3, "Independent Safety Engineering Group (ISEG),"

6.4.1, "Plant Review Board (PRB),"

6.4.2, "Safety Review Board (SRB),"

6.9, "Record Retention,"

In addition, the requirements of Specification 6.7.2 and 6.7.3 related to the review of the procedures of Specification 6.7.1 and changes thereto, would also be relocated to the FSAR Update.

ADD 1/0

Subsequent to our May 1, 1995, submittal, the NRC issued Administrative Letter 95-06, "Relocation of Technical Specification Administrative Controls Related to Quality Assurance." This letter provided NRC staff positions and lessons learned related to the relocation of the above TS requirements. At the request of the NRC staff, and in accordance with the recommendations of Administrative Letter 95-06, GPC states that the above referenced requirements will be relocated with no reduction in requirements to Chapter 17 of the FSAR Update. Future changes to these relocated requirements will be controlled in accordance with 10 CFR 50.54(a).

Sincerely,

  
C. K. McCoy
