SUBJECT: COMANCHE PEAK STEAM ELECTRIC STATION (CPSES)
DOCKET NO. 50-446
LARGE BORE PIPING AND SUPPORTS
SDAR: CP-86-36 (INTERIM REPORT)

REF: 1) TU Electric letter from W. G. Council to the NRC
dated March 22, 1988, TXX-88336

Gentlemen:

On June 9, 1986, TU Electric notified the NRC via TXX-4844 of a reportable deficiency involving the scope of plant modifications resulting from the project's pipe support validation program. The purpose of this report is to update the corrective action completion date for this issue.

Corrective actions for this issue consist of completion of large bore pipe support modifications categorized as prudent, recent industry practice, adjustment, or cumulative effects resulting from the Corrective Action Program (CAP). As stated in Reference (1), these corrective actions were scheduled for completion prior to the Unit 2 Hot Functional Test (HFT).

These corrective actions have been rescheduled for completion prior to Unit 2 fuel load. However, those modifications required for performance of the Unit 2 HFT will be completed prior to the start of HFT for Unit 2.

Sincerely,

William J. Cahill, Jr.

William J. Cahill, Jr.
