My name is Anne Mearns. My husband and I own property in both East Marlborough and West Vincent townships. I have lived in this area for the past 27 years. I have I want to go on record as saying I have no fault in any evacuation plan for that area because these roads could not handle the traffic that would result from a mass evacuation. These roads are basically the same as they were 20 years ago. There are backups at every major intersection during rush hour. How much time will we have to evacuate daily? How long will it take? Your questions cannot be answered. I have a seven year old daughter who goes to Kimberston Farms School. To the date, they have an unsigned plan, a plan that was prepared for them by Energy Consultants. Their One question they had concerns their plan is that they keep referring to 'staff' who are these 'staff' people? Certainly not the teachers most of whom are parents themselves and will want to be with their own children. It is a big assumption on Energy Consultants part that there will be any staff around to make sure that the children get on the buses (assuming that there are any buses available) and then ride with the children to the host schools and then if the children have to be moved to more care centers, they will also have to remain with their parents. They are picked up by parents.

There are just too many unanswered questions, too many unmet needs, too many "to be determined" in this evacuation plan to satisfy me.

In conclusion, we should all take note of the tragedy in India.

Accidents can occur, and they do occur.

Just as that plant should not have been located in so highly a populated area, so the Limerick power plant should not be located in such a highly populated area.

Why put so many at such a great risk?
