Abstract (Limit to 1400 spaces, i.e., approximately fifteen single-space typewritten lines) (16)

On January 3, 1985, at 1945, with Unit 2 defueled, the Train "B" Containment Purge Isolation System (CPIS) (EIIS System Code VA) actuated when the Containment Area Radiation Monitor 2RT-7857 (EIIS Component Code RIT) cabinet was opened for a routine surveillance. See also LER 84-030 (Docket No. 30-361). At the time, a containment purge was in progress, and all CPIS actuated components performed properly, isolating the main purge. Containment radiation levels were verified to be below the CPIS actuation setpoint, and CPIS was reset and the purge reinitiated. During the investigation following the actuation, the actuation could not be reproduced, nor were any defects discovered which could have caused the actuation. As corrective action for both this event and LER 84-030, a sign will be placed on the cabinet door cautioning personnel to open and close the door with care.

There are no credible circumstances under which these events would have been more severe.

Subject: Docket No. 50-361
           30-Day Report
           Licensee Event Report No. 85-007
           San Onofre Nuclear Generating Station, Unit 2

Pursuant to 10 CFR 50.73(a)(2)(iv), this submittal provides the required
30-day written Licensee Event Report (LER) for an occurrence involving the
actuation of the Containment Purge Isolation System. Neither the health and
safety of plant personnel nor the public were affected by this event.

If you require any additional information, please so advise.

Sincerely,

J. G. Haynes
