

# UNITED STATES NUCLEAR REGULATORY COMMISSION

REGION III 2443 WARRENVILLE ROAD, SUITE 210 LISLE, ILLINOIS 60532-4352

April 14, 2020

Mr. Bryan C. Hanson Senior VP, Exelon Generation Company, LLC President and CNO, Exelon Nuclear 4300 Winfield Road Warrenville, IL 60555

SUBJECT: QUAD CITIES NUCLEAR POWER STATION, UNITS 1 AND 2—NRC INITIAL LICENSE EXAMINATION REPORT 05000254/2020301 AND 05000265/2020301

Dear Mr. Hanson:

On April 3, 2020, the U.S. Nuclear Regulatory Commission (NRC) completed the initial operator licensing examination process for license applicants employed at your Quad Cities Nuclear Power Station. The enclosed report documents the results of those examinations. Preliminary observations noted during the examination process were discussed on March 20, 2020, with Mr. K. Ohr, Site Vice President, and other members of your staff. An exit meeting was conducted by telephone on April 10, 2020, with Mr. K. Ohr, Site Vice President, other members of your staff, and Mr. G. Roach, Chief Operator Licensing Examiner, to review the final grading of the written examination for the license applicants. The NRC also confirmed that the station submitted documentation noting that there were no post-examination comments for consideration during NRC grading of the examination.

The NRC examiners administered an initial license examination operating test during the week of March 16, 2020. The written examination was administered by Quad Cities Nuclear Power Station training department personnel on March 25, 2020. Six Senior Reactor Operator and four Reactor Operator applicants were administered license examinations. The results of the examinations were finalized on April 9, 2020. Ten applicants passed all sections of their respective examinations. Six applicants were issued senior operator licenses and four applicants were issued operator licenses.

The written examination administered operating test, as well as documents related to the development and review (outlines, review comments and resolution, etc.) of the examination will be withheld from public disclosure until April 3, 2022.

B. Hanson -2-

This letter, its enclosure, and your response (if any) will be made available for public inspection and copying at <a href="http://www.nrc.gov/reading-rm/adams.html">http://www.nrc.gov/reading-rm/adams.html</a> and at the NRC Public Document Room in accordance with Title 10 of the *Code of Federal Regulations*, Part 2.390, "Public Inspections, Exemptions, Requests for Withholding."

Sincerely,

Patricia J. Digitally signed by Patricia J. Pelke Pelke Date: 2020.04.14 16:45:36 -05'00'

Patricia J. Pelke, Chief Operations Branch Division of Reactor Safety

## U.S. NUCLEAR REGULATORY COMMISSION

#### REGION III

Docket No: 05000254; 05000265

License No: DPR-29; DPR-30

Report No: 05000254/2020301; 05000265/2020301

Enterprise Identifier: L-2020-OLL-0036

Licensee: Exelon Generation Company, LLC

Facility: Quad Cities Nuclear Power Station

Location: Cordova, IL

Dates: March 16, 2020, through April 3, 2020

Examiners: G. Roach, Senior Operations Engineer, Chief Examiner

R. Baker, Senior Operations Engineer, Examiner J. Seymour, Reactor Operations Engineer, Examiner

Approved by: P. Pelke, Chief

**Operations Branch** 

Division of Reactor Safety

### SUMMARY

Examination Report 05000254/2020301; 05000265/2020301; 03/16/2020–04/3/2020; Exelon Generation Company, LLC; Quad Cities Nuclear Power Station; Initial License Examination Report.

The announced initial operator licensing examination was conducted by regional Nuclear Regulatory Commission examiners in accordance with the guidance of NUREG-1021, "Operator Licensing Examination Standards for Power Reactors," Revision 11.

# **Examination Summary**

Ten applicants passed all sections of their respective examinations. Six applicants were issued senior operator licenses and four applicants were issued operator licenses. (Section 4OA5.1)

## **REPORT DETAILS**

#### 4OA5 Other Activities

## .1 <u>Initial Licensing Examinations</u>

#### a. Examination Scope

The U.S. Nuclear Regulatory Commission (NRC) examiners and members of the facility licensee's staff used the guidance prescribed in NUREG-1021, "Operator Licensing Examination Standards for Power Reactors," Revision 11, to develop, validate, administer, and grade the written examination and operating test. The written examination outlines were prepared by the NRC staff and were transmitted to the facility licensee's staff. Members of the facility licensee's staff prepared the operating test outlines and developed the written examination and operating test. The NRC examiners validated the proposed examination during the week of February 18, 2020, with the assistance of members of the facility licensee's staff. During the onsite validation week, the examiners audited four license applications for accuracy. The NRC examiners, with the assistance of members of the facility licensee's staff, administered the operating test, consisting of job performance measures and dynamic simulator scenarios, during the period of March 16, 2020, through March 21, 2020. The facility licensee administered the written examination on March 25, 2020.

## b. Findings

# (1) Written Examination

The NRC examiners determined that the written examination, as proposed by the licensee, was within the range of acceptability expected for a proposed examination. Less than or equal to 20 percent of the proposed examination questions were determined to be unsatisfactory and required modification or replacement.

During the validation of the written examination, several questions were modified or replaced. All changes made to the written examination were made in accordance with NUREG-1021, "Operator Licensing Examination Standards for Power Reactors," and were documented on Form ES-401-9, "Written Examination Review Worksheet." The Form ES-401-9, the written examination outlines (ES-401-1 and ES-401-3), and both the proposed and final written examinations, will be available electronically in the NRC Public Document Room or from the Publicly Available Records component of NRC's Agencywide Documents Access and Management System (ADAMS) on April 3, 2022, (ADAMS Accession Numbers ML19121A179, ML19121A185, ML19121A186, and ML19121A187, respectively).

On April 3, 2020, the licensee submitted documentation noting that there were no post-examination comments for consideration by the NRC examiners when grading the written examination.

The NRC examiners graded the written examination on April 7, 2020, and conducted a review of each missed question to determine the accuracy and validity of the examination questions.

## (2) Operating Test

The NRC examiners determined that the operating test, as originally proposed by the licensee, was within the range of acceptability expected for a proposed examination.

Following the review and validation of the operating test, minor modifications were made to several job performance measures, and some minor modifications were made to the dynamic simulator scenarios. All changes made to the operating test were made in accordance with NUREG-1021, "Operator Licensing Examination Standards for Power Reactors," and were documented on Form ES-301-7, "Operating Test Review Worksheet." The Form ES-301-7, the operating test outlines (ES-301-1, ES-301-2, and ES-D-1s), and both the proposed and final operating tests, will be available electronically in the NRC Public Document Room or from the Publicly Available Records component of NRC's ADAMS on April 3, 2022, (ADAMS Accession Numbers ML19121A179, ML19121A185, ML19121A186, and ML19121A187, respectively).

The NRC examiners completed operating test grading on April 6, 2020.

## (3) Examination Results

Six applicants at the Senior Reactor Operator level and four applicants at the Reactor Operator level were administered written examinations and operating tests.

Ten applicants passed all portions of their examinations and were issued their respective operating licenses on April 9, 2020.

# .2 Examination Security

## a. <u>Scope</u>

The NRC examiners reviewed and observed the licensee's implementation of examination security requirements during the examination validation and administration to assure compliance with Title10 of the *Code of Federal Regulations*, Part 55.49, "Integrity of Examinations and Tests." The examiners used the guidelines provided in NUREG-1021, "Operator Licensing Examination Standards for Power Reactors," to determine acceptability of the licensee's examination security activities.

#### b. Findings

None.

## 4OA6 Management Meetings

#### .1 Debrief

The chief examiner presented the examination team's preliminary observations and findings on March 20, 2020, to Mr. K. Ohr, Site Vice President, and other members of the Quad Cities Nuclear Power Station staff.

# .2 Exit Meeting

The chief examiner conducted an exit meeting on April 10, 2020, Mr. K. Ohr, Site Vice President, and other members of the Quad Cities Nuclear Power Station staff, by telephone. The chief examiner asked the licensee whether any of the material used to develop or administer the examination should be considered proprietary. No proprietary or sensitive information was identified during the examination or debrief/exit meetings.

#### SIMULATOR FIDELITY REPORT

Facility Licensee: Quad Cities Nuclear Power Station

Facility Docket No: 050–254; 050-265

Operating Tests Administered: March 16, 2020, through March 21, 2020

The following documents observations made by the U.S. Nuclear Regulatory Commission examination team during the initial operator license examination. These observations do not constitute audit or inspection findings and are not, without further verification and review, indicative of non-compliance with Title 10 of the *Code of Federal Regulations*, Part 55.45(b). These observations do not affect U.S. Nuclear Regulatory Commission certification or approval of the simulation facility other than to provide information which may be used in future evaluations. No licensee action is required in response to these observations.

During the conduct of the simulator portion of the operating tests, the following items were observed:
