

November 9, 1983

Note to Bob Lee

SUBJECT: ARKANSAS 2 SEISMIC INSTRUMENTATION (OELD # 838 989)

The package isn't bad as far as it goes but the problem is, once you say the examples don't apply, you have to analyze all of the three standards. You have to discuss them, analyze them and show why they don't trip any of the three standards for no significant hazards. If you don't have an example you have to discuss the standards.
