Note to Eleanor Adensam

SUBJECT: MCGUIRE - BATTERY POWERED EMERGENCY LIGHTS IN THE SSF  
(OELD # 841 774)

Eleanor, this package is in acceptable shape now. There is no "legal objection" anymore to this package. However, I have a question for you. Is this thing true? This thing says that the SSF is not to be used for any purpose except for shutdown in the event of a fire. If this isn't the GDC-19 equipment, where is it? Is it true that the SSF is not used and is not to be used for GDC-19 purposes? It has no function except to function in the event of a fire and only in the event of a fire? Not any other event? Not a radiological emergency, or a GDC-19 problem? If that is correct, then this package can be dispatched. If not, the package is not correct and you have to do something about it.
