Note to G. Rivenbark

SUBJECT: HATCH 1 RADIOLOGICAL EFFLUENTS (OELD # 837 387)

George, why are we using the shrunken version of the Appendix I notice? OELD signed off on a couple of longer versions on the Appendix I packages on some of the other plants, but this seems to be coming down to a shrunken version again. Just call me on the phone and let me know what this is all about. I'm not suggesting a particular change at the moment but I want to understand why we are going back to the short version of these Appendix I tech spec changes.
