Note to Helen Nicolaras

SUBJECT: MONTICELLO TIME DELAY SETPOINTS (OELD # 837 694)

The package is okay except for one thing, Helen. If you're going to use this "compensating features" argument you need to at least discuss something of what you mean. What are the compensating measures that are being provided to make sure this thing is dandy? You are going to have to give a description of some indication of those things. Why don't you come over and talk to me about it (I will be in travel status 10/3-7). I don't think its a big deal.

AMB

Principal

I've tried to call you on this but you have been very busy. The compensating measures, in this case, is a feature which involves less spurious trips and challenges to the KPS power monitoring system. The feature is somewhat intangible but it involves a longer time interval to avoid spurious trips when large motors are started. This aspect is discussed in the preface, as noted in the margins. If you would like to discuss this further, please call me @ 28561. Helen
