Note to Gus Lainas

SUBJECT: ARKANSAS 2 URANIUM ENRICHMENT FUEL (OELD # 837 995)

The package is now in proper form and the technical statements in it reflect the information provided in a telephone call Bob Lee set up with Burlinger and Dan Fino. However, although it may be technically accurate, I think ~~the~~ appearance focuses on a rather broad policy and I want the policy implication discussed with Darrell. Specifically, we have a notice that says the safety of the core is unrelated to fuel composition but fuel composition is very important to safety in the spent fuel storage rack. Accordingly, we don't care about what kind of fuel that's put in the core but we are very concerned about what's put in the spent fuel storage rack. That makes absolutely no policy sense.
