MEMORANDUM FOR: Richard C. DeYoung, Director
Office of Inspection and Enforcement

Harold R. Denton, Director
Office of Nuclear Reactor Regulation

FROM: William J. Dircks
Executive Director for Operations

SUBJECT: DIABLO CANYON SMALL AND LARGE BORE PIPING ISSUES

The Commission has requested that the ACRS review the inspection find-
ings and concerns expressed by Mr. Yin and provide to the Commission the
Committee's recommendation on issuance of a Diablo Canyon low power
license. To assist the Committee, please initiate a comprehensive
review of the quality assurance and design issues related to large and
small bore piping issues raised by Mr. Yin. This review should identify
the regulatory basis for and importance of the issues and overall impact
that these issues would have on the safety of low power operation. This
review should also consider, where appropriate, the generic significance
of these issues.

The ACRS should be presented the results of this review on April 6,
1984. Utilize whatever resources you deem appropriate, from the head-
quarter offices and regions, to accomplish these objectives. I suggest
that consideration of the QA aspects be led by Jim Taylor and considera-
tion of the technical piping issues be led by Jim Knight and that
overall responsibility for the effort be assigned to Dick Vollmer. The
review effort should be organized and scheduled along the lines shown in
the enclosure.

(Signed) William J. Dircks

William J. Dircks
Executive Director for Operations
