Gentlemen:

SUBJECT: NRC INSPECTION REPORT NO. 50-445/92-41; 50-446/92-41

This refers to the inspection conducted by Mr. D. R. Hunter and the inspector identified in the attached report, of this office September 14-18, 1992. The inspection included a review of activities authorized for your Comanche Peak Steam Electric Station, Units 1 and 2, facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examination of procedures and representative records, interviews with personnel, and observation of activities in progress.

Within the scope of this inspection, no violations or deviations were identified. Balance-of-plant activities were in general being controlled in an effective manner. A strength was noted in the control of temporary leakage repairs. The control and tracking of problem annunciators was good and the equipment failure analysis and trending program was effective for potential problem identification. A concern was noted with the tracking of caution and work items and a potential weakness was noted with tracking of completion of corrective actions for balance-of-plant items.

In accordance with 10 CFR Part 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be placed in the NRC Public Document Room.
