THRU: R. J. Schmitt, Chief, ORB #1, L

SAFETY EVALUATION OF CHANGE NO. 2

By application dated August 2, 1972, Reed College requested changes to the Technical Specifications "to provide" clarification of responsibility for review of facility operations. They also requested a change in the facility license to allow certain records and checklists to be disposed of after 3 years.

The requested change in Section I-2 and I-3 of the Technical Specifications clarifies the responsibility of the Radiation Safety Committee to review of safety aspects of the facility operations and the responsibility of the Reactor Operations Committee to review of all facility operations. The Reactor Operations Committee is composed of individuals who are familiar with reactor operations and are therefore assigned the responsibility of reviewing facility operations and the Radiation Safety Committee is assigned the responsibility of reviewing safety aspects of operations. Our review indicates adequate organizational structure for the operational and safety matters under the proposed specifications.

Reed College also requested a change in the reactor license which would permit the disposal of certain records after a 3-year lapse of time. We have determined that the details of record keeping should be in the Technical Specifications and have therefore deleted reference to records from the reactor license and have established appropriate technical specifications. These specifications require a five-year retention period for the types of records Reed College would like to destroy after three years. The amendment and change to the Technical Specifications were discussed with the licensee.

Based on our review of proposed changes to the Technical Specifications and amendment to License No. R-112, as modified, we conclude that there is reasonable assurance that the health and safety of the public will not be endangered by operation in the manner proposed.
