Docket: 50-059

Texas A&M University
College of Engineering
ATTN: Dr. Carl A. Erdman
Department of Nuclear Engineering
College Station, Texas 77843-3133

Gentlemen:

This acknowledges the receipt of your letter of October 11, 1984, by which you transmitted the revised security plan for your facility.

It appears that some of the proposed changes may have safety or policy implications which require action at Headquarters level. Accordingly, the revised plan has been submitted to the Office of Nuclear Materials Safety and Safeguards for appropriate action.

Sincerely,

Original Signed By
E. H. Johnson

E. H. Johnson, Chief
Reactor Project Branch 1

Attn: Mr. James Kelly

Reference: Docket 50-59
License R-23

Dear Mr. Kelly:

Enclosed are three (3) copies of the revised security plan for the AGN-201M reactor at Texas A&M University. **This plan should be withheld from public disclosure.** The changes were necessitated by the relocation of the reactor console and the construction of a security wall in the reactor room. These changes have not decreased the effectiveness of the previously approved plan; therefore, this letter is simply to inform you that such changes have been made. The modifications were completed on 20 September 1984. The changes have been approved by the Reactor Safety Board.

The above changes also necessitated revisions in the emergency plan. Three (3) copies of the new plan are being sent under separate cover.

If you have any questions concerning the changes and revisions, please contact me at (409) 845-4161.

Sincerely,

Carl A. Erdman
Professor and Head
