

REPORT OF INFORMATION REMOVED FROM REVISION 21 OF THE CATAWBA NUCLEAR STATION, UNITS 1  
AND 2 UFSAR

1. Table 15-22 "Parameters for the Postulated Locked Rotor Accident" Removed due to excessive detail. A revised assumption in the Alternative Source Terms (AST) of the CNS Locked Rotor Accident (LRA) is that no post-accident fuel failure occurs. The radiological consequences of the CNS LAR are bounded by the Main Steam Line Break (MSLB). Therefore, the parameters listed in Table 15-22 are no longer applicable.
