ABSTRACT (Limit to 1400 spaces, i.e., approximately fifteen single-space typewritten lines) (16)

ABSTRACT

On October 5, 1984, it was determined that a contract employee received greater than 1.250 rem during the third quarter of 1984 without having a properly completed Form NRC-4, Occupational External Radiation Exposure History, on file as required by 10CFR20.101(b)(3). This event is reportable pursuant to 10CFR20.405(a)(1)(i). The maximum permissible quarterly whole body exposure limit of 3.0 rem as specified in 10CFR20.101(b)(1) and the permissible accumulated dose of 5(N-18) rem as specified in 10CFR20.101(b)(2) were not exceeded. This event was caused by the employee's failure to properly complete Form NRC-4. The North Anna Training Department has been instructed to emphasize the importance of disclosing all information requested by Form NRC-4 to prevent a similar event from occurring.

TEXT (If more space is required, use additional NRC Form 365A's) (17)

On October 5, 1984, it was determined that a contract employee received greater than 1.250 rem during the third quarter of 1984 without having a properly completed Form NRC-4, Occupational External Radiation Exposure History, on file as required by 10CFR20.101(b)(3). This event is reportable pursuant to 10CFR20.405 (a) (1) (i). The maximum permissible quarterly whole body exposure limit of 3.0 rem as specified in 10CFR20.101(b)(1) and the permissible accumulated dose of 5(N-18) rem as specified in 10CFR20.101(b)(2) were not exceeded. This event is similar to events described in letter Serial No. 444 dated July 29, 1982, and letter Serial No. 604 dated October 20, 1983.

The employee involved was requested to complete a Form NRC-4 on July 9, 1984, including signing of the "Certification", block number 12. Since information provided by the employee indicated no current quarter exposure, the administrative limit of 0.750 rem was imposed on the employee while radiation exposure history information was being obtained. Upon receipt of the information, the employee was authorized to receive radiation exposure not to exceed 1.750 rem per quarter and did receive a total exposure of 1.293 rem.

Upon termination of his employment period on October 5, 1984, the employee requested a copy of his current exposure records and a copy of his exposure records from previous work assignments at North Anna Power Station. Extensive questioning of the employee and an investigation of station records revealed that he had been assigned to the station on three previous occasions. Since it had been longer than one year since his last termination date, his past exposure history had been purged from the active, computerized, exposure records system and his permanent exposure history file had been transferred from Dose Control records to permanent records storage.

The event was caused by the employee's failure to properly complete the Form NRC-4. Had the form reflected all previous employments, dates of employment, and periods of exposure, a records search would have been initiated and the event precluded.

The North Anna Nuclear Training Department has been instructed to emphasize in General Employee Training and General Employee Retraining classes the importance of disclosing all information requested by the Form NRC-4 to prevent a similar event from occurring.

Pursuant to 10CFR2.790(a)(6), it is requested that Attachment A to this report be exempt from public disclosure in that it is felt it would constitute an unwarranted invasion of privacy should it be released. In accordance with 10CFR20.409, a copy of this report notifies the employee of his exposure concurrent with notification to the Nuclear Regulatory Commission.
