Mr. Daniel R. Muller  
Assistant Director for  
Environmental Projects  
Directorate of Licensing  
U. S. Atomic Energy Commission  
Washington, DC 20545

50-219

Dear Mr. Muller:

SUBJECT: OYSTER CREEK NUCLEAR GENERATING STATION  
ENVIRONMENTAL TECHNICAL SPECIFICATIONS

In a letter dated July 25, 1973, we responded to your letter dated July 10, 1973, which requested that Jersey Central Power & Light Company submit proposed Environmental Technical Specifications for the Oyster Creek Station by September 3, 1973. Our response at that time was that we expected to be able to meet the requested submittal date.

This is to inform you that we have subsequently ascertained that we will not be in a position to submit the requested Technical Specifications by September 3, 1973. Our initial efforts at compiling the required information have demonstrated that a number of firm commitments must be made before a viable set of Technical Specifications can be submitted. We require additional time to formulate our position with regard to these commitments.

In addition, the exact nature of Technical Specifications requires that one proceed with great care in order to formulate them correctly. This requires a great deal of time both in preparation and review. It must also be understood that we are presently engaged in a large scale effort to respond to questions regarding our Full Term Operating License as well as Commission concerns on the effects of Fuel Densification.

In this context, we are anticipating that we can submit our proposed Environmental Technical Specifications during the week of November 5, 1973.

Very truly yours,

*Ivan R. Fintrock, Jr.*  
Ivan R. Fintrock, Jr.  
Vice President
