CO INSPECTION REPORT NO. 50-219/71-03
JERSEY CENTRAL POWER & LIGHT COMPANY
OYSTER CREEK 1 - BWR

Approximately 75% of the time spent at the site was used in observing the fuel handling and fuel inspection process. It appeared that the procedures were being followed and the overall operation was being performed in a safe manner.

The area of reservation I have is the lack of nuclear knowledge and experience of the GE fuel handlers. They were given about two weeks of training before the operation started, their backgrounds to that point were non-nuclear. I don't think the nuclear industry is ready for people performing monkey functions.
