R. T. Carlson, Chief
Reactor Operations Branch, Region I

SPECIAL INSPECTION - JERSEY CENTRAL (OYSTER CREEK) DOCKET NO. 50-219

The attached report of the inspection performed at the General Public
Utility Service Company (GPUSC) on April 10 and 11, 1973 is forwarded
for issuance by your office. The inspection, performed by Mr. Pomeroy
and Mr. Potapovs, consisted of a review of the results of audits made
by GPUSC of their Oyster Creek reload fuel supplier EXXON Nuclear Co.
(ENC).

During this inspection it was determined that GPUSC, with their consultants,
performed effective and well documented audits of the fuel supplier
and his major suppliers. A weakness in their documentation of follow-
up actions was identified by the licensee and has been corrected.

An outline of the Q/A program for the Oyster Creek reload fuel has
been submitted by the applicant[1]. The submittal also includes a
summary of the Q/A activities of GPUSC relative to this fuel. This
inspection report references this submittal rather than repeating much
of it.

Many of the details of this inspection involve the proprietary data
and processes of the fuel manufacturer (ENC), and are therefore
transmitted as field notes and not as a part of this report. We
therefore, believe that the licensee will find this report acceptable
for release to the PDR.

---

[1]Attachment No. 1 to Facility Change Request No. 4, dated
January 18, 1973.

Although this inspection report does not follow the precise outline
suggested in the RO manual, we believe it may be issued as is, with
the addition of the standard cover sheet. The paragraphs omitted
from the standard format are not applicable to this special inspection.

G. W. Reinmuth, Chief
Technical Assistance Branch
Directorate of Regulatory Operations
