J. B. Henderson, Chief, Reactor Construction  
Branch, Division of Compliance, HQ

JERSEY CENTRAL POWER & LIGHT COMPANY  
FORKED RIVER 1  
DOCKET NO. 50-363

The enclosed report of the inspection of the Jersey Central Power and Light Company's Forked River Quality Assurance Program, conducted on June 29, 1971 by R. F. Heishman and W. H. Hayward is forwarded for information.

The areas of the licensee's QA program considered incomplete or deficient during the initial QA inspection have been revised and now appear to meet both the words and intent of 10 CFR 50, Appendix B.

The QA/QC procedures and instructions developed to date by the contractors, and their schedule for completion of the remainder seem to be commensurable with the project status.

The inspectors were able to ascertain by the review of selected documents that the QA program is being diligently implemented in the areas of design control and procurement of major components.

No further inspections are scheduled until construction activities commence at the site.
