

UNITED STATES  
ATOMIC ENERGY COMMISSION  
DIVISION OF COMPLIANCE  
REGION I  
970 BROAD STREET  
NEWARK, NEW JERSEY 07102

201 645-3960

AUG 4 1971

E. M. Howard, Senior Reactor Inspector  
Region I, Division of Compliance

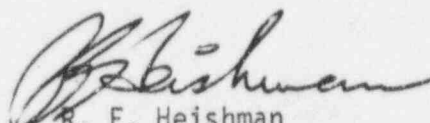

JERSEY CENTRAL POWER AND LIGHT CO.  
FORKED RIVER 1  
CO REPORT 71-02

The Forked River QA Plan has been approved and implemented. The major contractors have developed detailed procedures and instructions covering the activities now in progress and scheduled in the near future. A schedule for completion of the remaining portions appear commensurate with the project status.

The JCP&L/CE contract has not been signed; however, the QA plan, which will be referenced in the contract, has been approved by GPU/JCP&L.

A site visit will be scheduled when activities start onsite.

The management exit interview was held on July 23, 1971. R. Howard and B. G. Avers were receptive and stated their intentions regarding documentation of quality. Documentation requirements allow for the use of Certificates of Compliance; however, GPU stated their intentions were to have all documentation regarding quality on site prior to installation or use.

  
R. F. Heishman  
Reactor Inspector
