

# Jersey Central Power & Light Company

MADISON AVENUE AT PUNCH BOWL ROAD • MORRISTOWN, N. J. 07960 • 539-6111

April 4, 1973

Mr. A. Giambusso  
Deputy Director for Reactor Projects  
United States Atomic Energy Commission  
Washington, D. C. 20545

Dear Mr. Giambusso:

SUBJECT: SUPPLEMENT NO. 2  
FACILITY CHANGE REQUEST NO. 4  
OYSTER CREEK NUCLEAR GENERATING STATION  
DOCKET NO. 50-219

Pursuant to Title 10, Code of Federal Regulations, Section 50.59, three signed originals and 37 copies of the Oyster Creek Nuclear Generating Station Supplement No. 2 to Facility Change Request No. 4 are herein submitted.

This document requests Commission authorization to load and operate the core with four PuO<sub>2</sub> - UO<sub>2</sub> (mixed oxide) fueled lead assemblies included in the configuration described herein as modified from the configuration described in Facility Change Request No. 4. The safety, transient and accident analyses necessary to support Jersey Central's contention that such operation will not endanger the health and safety of the public are included.

The enclosed Change Request has been reviewed by the Plant Operations Review Committee and the General Office Review Board and has received the approval of both committees.

In light of the fact that this submittal is being made in such close proximity to the mid-April refueling outage, with fuel loading to commence during the first week of the outage, your prompt review and approval of this change is requested.

Very truly yours,

  
R. H. Sims  
Vice President
