Inspection Summary

Inspection on January 17-24, 1985 (Report No. 50-461/85-06(DRSS))

Areas Inspected: Included a review of the licensee's actions and progress in planning, scheduling, and implementation of the security program. The inspection involved 60 inspector-hours by two NRC inspectors. The onsite inspection began during the day shift. Four of the 60 inspector-hours were completed during nonregular duty hours.

Results: The licensee appeared to be progressing satisfactorily in planning, scheduling, and implementation of the security program. Construction and testing for security functions appeared to be progressing adequately. Additional security actions were required to prepare for onsite receipt of nuclear fuel. The major milestones for the security program, under existing planning schedules, occur during the June-September 1985 time frame. Scheduled security project completion is demanding but achievable if sufficient resources are devoted to the implementation effort.
