MEMO TO FILE

MAR 4 1974

THRU D. L. CAPHTON, SENIOR REACTOR INSPECTOR

OYSTER CREEK (DN 50-219)

I received a call from Mr. Stu Rose of the "Trentonian" newspaper, Trenton, New Jersey, regarding 1/11/74 shutdown at Oyster Creek. Mr. Rose was interested in whether or not unidentified leakage problems were precipitated by some overt act on the part of JCP&L or an individual. I described T.S. requirements, etc., in detail and Mr. Rose appeared satisfied. He specifically asked if I had physically examined any leaking valves. I replied in the negative (drywell had not been opened at conclusion of the inspection). I agreed to furnish Rose a copy of report 50-219/74-01 and the associated AO report concerning snubber inspections.

E. G. Greenman
Reactor Inspector
