Mark I Containment Program
Plant Unique Analysis Reports

- Enclosures:
- 1) "Plant-Unique Analysis Report of the Torus Suppression Chamber for Pilgrim Station - Unit I" TR-5310-1 - Revision 2 dated September 14, 1984
 - 2) "Plant-Unique Analysis Report of the Torus Attached Piping for Pilgrim Nuclear Power Station" TR-5310-2 - Revision 1 dated September 1984

Dear Sir:

A meeting was held on August 23 and 24, 1984 at the offices of Teledyne Engineering Services (Waltham, Mass.). Mr. Robert Hermann (NRC) indicated at this meeting that all responses were complete and satisfactory and that the NRC review of the Mark I Containment Plant Unique Analysis Report (PUAR) for Pilgrim Station was concluded.

At this meeting we informed Mr. Hermann (and Mr. P. H. Leech via telecon at a later date) that we intended to provide one final submittal.

This submittal contains the two primary documents (referenced above) which have been revised to include the results of all correspondence, meetings and reviewer comments, thus providing two concise documents. We are providing these for docketing purposes only and no further review is required.

Should you have any questions, please do not hesitate to contact us.

Very truly yours,

W.D. Harrington
