Division of Reactor Licensing

OYSTER CREEK - CLARIFICATION OF FES

We need a clarification of statements in the FES to aid our work in inspection and monitoring of work being done by the licensee. Paragraph 7.(b) of the Summary and Conclusions of the FES indicates that the "discharge canal" be cleared of "trashwood, pilings, bulkheads, and other wood that now harbors a resident breeding population of marine borers,..."

1. What is intended by the words discharge canal? That is, does this mean the area that extends as far as the marinas that were recently purchased by the licensee? Does the area in question extend beyond those marinas now owned by the licensee, toward the bay, where there are many privately owned slips and docks with a lot of exposed wood. Does the FES recommendation include the removal and replacement of all these materials, as well?
2. Does this mean that bulkheads be removed only if a resident population of marine borers is present? (The licensee has stated that plans did not call for their removal because, as the licensee contended, bulkheads, if backfilled, did not harbor shipworms. He said that the shipworms were only found in wood submerged in water on both sides.)

Please give me a call if you have any questions about this request.
