Memo to File

THRU: Gary Snyder, Acting Senior Reactor Inspector
EWR Section IE:I Operations Branch

Jersey Central Power & Light Co.
Oyster Creek
DN-50-219

SRO COVERAGE DURING REFUELING

I called D. Ross, Manager Nuclear Generating Stations at 11:40 A.M. April 4, 1975, to advise JCP&L that:

- 1) The NRC position with respect to an SRO on the 119 level with no concurrent duties was firm.
- 2) There may be paper work issued on April 4, 1975, with two parallel paths being pursued. (RL and OIE).

I asked Mr. Ross if he had discussed recent examinations of operators with Paul Collins or Campbell in Operator Licensing. Mr. Ross replied in the negative but added that in light of my conversation, he would do so.

Mr. Ross stated that the issue was understood and that there would be an SRO on the floor with no concurrent duties during refueling. I replied that E. J. Brunner would probably call Mr. Finfrøkk in this regard later in the day.

The conversation ended on a cordial note.

E. G. Greenman, Reactor Inspector
