July 3, 1975

Mr. George Lear, Chief
Operating Reactors Branch #3
Division of Reactor Licensing
United States Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Lear:

SUBJECT: Oyster Creek Nuclear Generating Station
Docket No. 50-219
Suppression Pool Dynamic Phenomena

The following is to supplement our response, dated May 6, 1975, to your letter of April 17, 1975. Our May 6, 1975 letter stated that within 60 days of that date we would submit the details of the tentative program, i.e., the Long Term Program, outlined in that letter. We also stated that by August 4, 1975 we would submit an evaluation of the Oyster Creek containment configuration, i.e., the Short Term Program, based on currently available data to assure you that the integrity and safety performance of the Oyster Creek containment are maintained under LOCA conditions.

These programs are being directed by General Electric as an agent for the utilities having Mark I containments. A letter from Mr. I. F. Stuart of General Electric to Mr. R. L. Tedesco of the NRC, dated June 13, 1975, discusses the current status of these programs and proposes meetings with the NRC staff to discuss in detail the Short Term Program and the development of the details of the Long Term Program. For reasons discussed in that letter, we will be unable to meet the commitments made in our letter dated May 6, 1975. It is our intention to make the Oyster Creek submittal in a time frame consistent with the General Electric program and our internal review requirements.

Very truly yours,

Ivan R. Finfrock, Jr.
Ivan R. Finfrock, Jr.
Vice President
